EXAMINER'S AMENDMENT

This Office Action is in response to the amendments and remarks filed on 7/14/2010.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Patrick Hilsmier, attorney of record, on 9/9/2010.

Regarding claim 2, paragraph 5, line 6 replace the recitation "...side heat exchanger being used..." with "...side heat exchanger is used..." for clarity.

Similarly, in paragraphs 6 and 7 line 1, replace the recitation "...heat exchanger operating..." with "...heat exchanger operates..." for clarity.

The withdrawn non-elected claims 3, 5-8, and 19-38 have been cancelled.

Allowable Subject Matter

Amended claims 2, 4, and 9-18 are allowed.

Statement of Reasons for Allowance

The prior art does not anticipate nor render obvious the combination set forth in the independent claim. The closest prior art, Rhodes US 4793143, is not arranged as claimed. Additionally, the system of Rhodes as modified in the Final Rejection dated March 18, 2010 is not capable of operating as recited in the claims as noted by the Applicant in the remarks (see pages 13 and 14). It would not have been obvious to modify the system of Rhodes to be able to function as recited in the claims, specifically to have only the compression mechanism and the

Formatted: Bullets and Numbering

heat source side heat exchanger being used in common with the first and second utilization side refrigerant circuits, the heat source side heat exchanger operating as a condenser of the refrigerant discharged from the compression mechanism when the air heat exchangers operate as evaporators of the refrigerant, and the heat source side heat exchanger operating as an evaporator of the refrigerant condensed in the air heat exchanger when the air heat exchangers operate as condensers of the refrigerant discharged from the compression mechanism, without impermissible hindsight. As modified in the Final Rejection, the heat source side heat exchanger would correspond with a heat exchanger replacing accumulator (96) as shown in Fig. 9. However, Rhodes shows that in both modes of operation of the system as evidenced by the solid and dashed flow arrows that the refrigerant flows in a single direction through the heat exchanger (as modified in the Final Rejection) and compressor (85) preventing the heat exchanger from being capable of operating as both a condenser and an evaporator of the refrigerant as required by the claim. It should also be noted that switching valves and by-passes in communication with a compressor inlet are well known in the typical heat pump systems to change the direction of refrigerant flow depending on the desired operation. However, unlike many of the prior art systems the Applicant's invention utilizes a switching valve to change the inlet to the compressor and send the discharged refrigerant to a single (heat source side) heat exchanger rather than switching or redirecting the flow of the refrigerant discharged from the compressor to different heat exchangers depending on the desired operation of the system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
